绝缘等级

电动机的绝缘系统由给定的绝缘等级根据其热阻确定。这种热电阻应通过电机绝缘系统中使用的整套电绝缘材料来保证。

热阻分类与电动机额定运行条件下绝缘热点的温度有关，允许平均温度的最高允许升高。

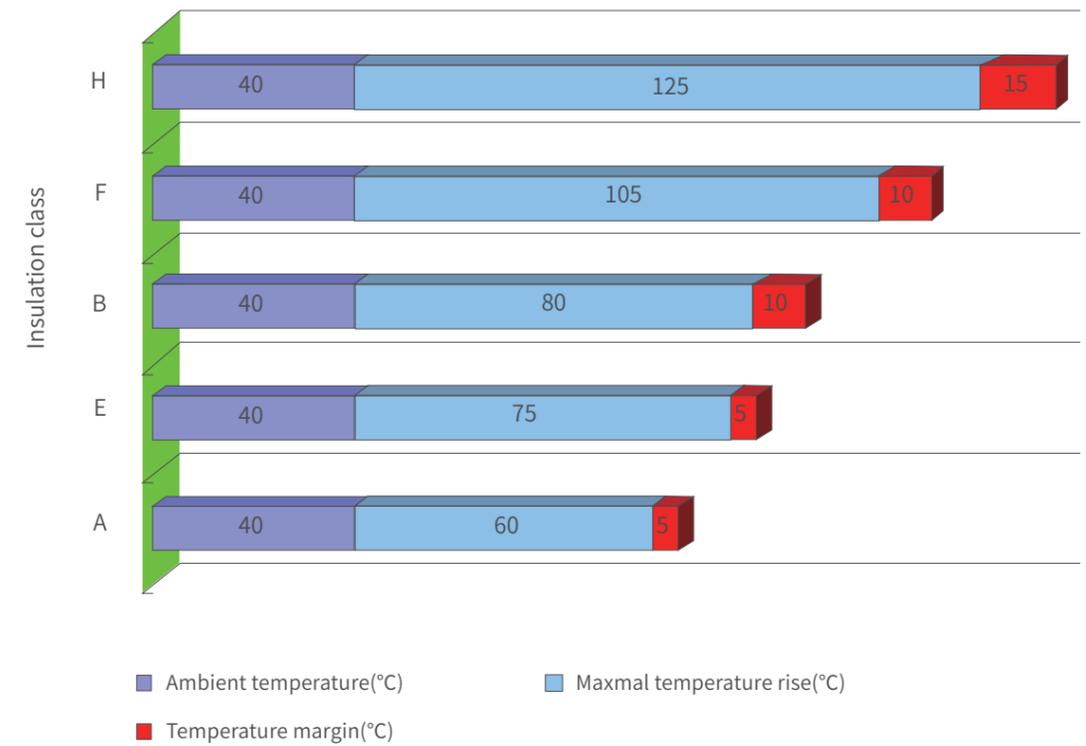

选择该温升时，应确保在最高允许环境温度下，绝缘热点的温度不会超过给定热阻等级的指定值。

Insulation classification

The insulation system of an electric motor is determined by a given insulation class on the basis of its thermal resistance. This thermal resistance should be guaranteed by the entire set of electric insulating materials used in the motor insulating system.

Thermal resistance classification is related to the temperature of the hotspot in the insulation occurring during rated operating conditions of the electric motor, allowing for the highest permissible rise in average temperature.

This rise should be selected so that at the highest permissible ambient temperature, the temperature of the hotspot in insulation will not exceed the value assigned to a give thermal resistance class.

防护等级 IP

根据IEC60034-5标准, 电机配有IP代码, 该代码决定了外壳对接触危险部件、引入异物和/或水的防护等级。

IP代码由IP代码字母和两个必需数字组成, 意思是:			
第一位(防止固体异物进入)		第二位数字(防止水渗透及其有害影响)	
IP	定义	IP	定义
0	没有保护	0	没有保护
1	直径 \geq 50mm	1	垂直下降
2	直径 \geq 12.5mm	2	滴水(up to 15°)
3	直径 \geq 2.5mm	3	防淋水
4	直径 \geq 1.0mm	4	防溅
5	有限防尘保护	5	防喷水
		6	防强烈的喷水
		7	短时间浸泡
		8	永久浸泡

Degree of protection IP

According to the IEC60034-5 standard the electric motors are provided with IP code which determines the degree of protection ensured by the housing against access to dangerous parts, introducing foreign matter and/ or water.

The IP code consists of IP code letters and two obligatory digits, meaning:			
The first digit (protection from introduction of solid foreign matter)		The second digit(Protection against penetration of water and its harmful effects)	
IP	Definition	IP	Definition
0	No protection	0	No protection
1	Diameter \geq 50mm	1	Dropping vertically
2	Diameter \geq 12.5mm	2	Dropping (up to 15°)
3	Diameter \geq 2.5mm	3	sprayed
4	Diameter \geq 1.0mm	4	Splashed

YE3 系列

三相异步电动机

YE3 series Three-phase Asynchronous Motor

YE3系列三相异步电动机,是为了建设节约型社会而开发的一种高效率节能型产品,其效率指标达到了国家中小型三相异步电动机能效限定值及能效等级GB18613-2012的2级和欧洲IE3的指标,平均效率比Y2系列电机高出4.0%。

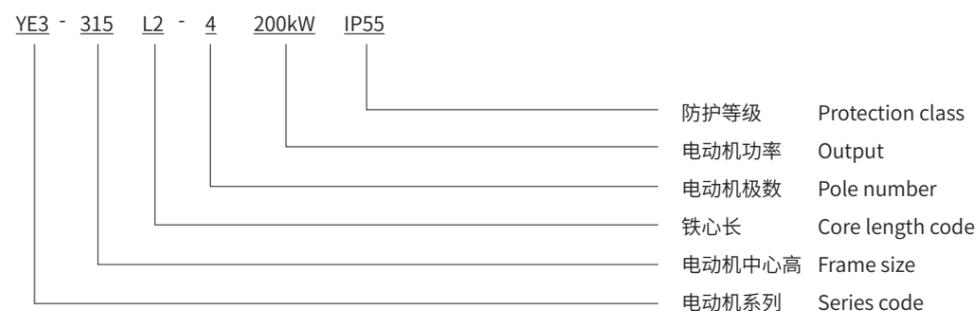

节能电机可以明显地减少预算的压力,显而易见:高的能源消耗会带来运行费用的明显增加,如果您减少这些费用,您就能增加利润,而且是纯利润,并且产品也能更加有利于保护环境,还能更加适应越来越强的节能意识和新的法律规定。

YE3 series three-phase asynchronous motor, is to build a conservation-oriented society and developed a high efficiency and energy-saving products, its efficiency reached the national small and medium-sized three-phase asynchronous motor energy efficiency limit value and energy efficiency level GB18613-2012 level 2 and European IE3 indicators, the average efficiency is 4.0% higher than the Y2 series motor.

Energy-efficient motors can significantly reduce the pressure on the budget, high energy consumption will lead to a significant increase in operating costs, if you reduce these costs, you can increase net profits, and the product can also be more conducive to the protection of the environment, but also more adaptable to the increasing awareness of energy savings and new legal regulations.

YE3VP 系列

变频调速三相异步电动机

YE3VP series Frequency-variable Induction Motor

YE3VP系列变频调速三相异步电动机是根据国家政策和响应市场的需求,在2011年开发研制的高效变频调速电动机,其工频380V、50Hz的效率指标达到了国家中小型三相异步电动机能效限定值及能效级GB18613-2012的3级。它具有效率高、噪音低,振动小,调速范围广,运行可靠等优点。

该系列电机采用优越的电磁设计方案及低能耗的冷轧硅钢板和纯度很高的防电晕电磁漆包线,以使电机在低速时恒转矩输出及在高频段保持一定的过载能力。采用性能优良的电磁线及绝缘材料,可靠的浸渍过程及检测措施,使电机在变频器高频载波引起的过电压方面具有很强的适应能力。

YE3VP系列变频调速电机采用独立的风机冷却,以保证电机在低速长期运行时温升不超过允许值。

YE3VP系列电机安装尺寸与功率的对应关系,除外形轴向长度外,安装尺寸与Y2VP系列电机一样,便于选型,安装,维护和互换。

YE3VP系列电机可方便的安装制动装置,编码器,测速机以实现快速制动和自动控制。

YE3VP系列变频调速电机,广泛用于纺织、风机,水泵调节流量及机床、化工冶金、钢铁等行业的恒转矩(基频以下)和恒功率(基频以上)调速,并可以满足造纸、电缆、塑料、包装、电梯、起重等特殊领域的需要。

YE3VP frequency conversion motor is based on national policies and in response to market demand, in 2011, developed high efficiency variable frequency motor. 380V, 50Hz efficiency indicators reached the national small and medium-sized three-phase asynchronous motor energy efficiency limit value and energy efficiency level GB18613-2012 level 3. It has the advantages of high efficiency, low noise, small vibration, wide speed range, and reliable operation.

This series of motors adopts superior electromagnetic design and low energy consumption of cold-rolled silicon steel sheets and high purity anti-corona copper wire, so that the motor at low speed constant torque output and in the high frequency maintain a certain overload ability. The use of excellent performance of copper wires and insulation materials, reliable impregnation process and detection measures, so that the motor has a strong adaptability during motor overloading when working together with frequency inverter.

YE3VP motor adopts independent fan cooling to ensure that the temperature rise of the motor does not exceed the allowable value when running at low speed for a long time. Ye3VP series motor mounting dimension and power correspondence, except for the axial length, the mounting dimension is the same as the Y2VP series motor, easy to install and maintain, etc.

YE3VP series motors can be easily installed with brakes, encoders for fast braking and automatic control.

YE3VP series motor, widely used in textile, fan, water pump and machine tools, chemical metallurgy, steel and other industries of constant torque (below the base frequency) and constant power (above the base frequency) speed regulation, and can meet the needs of papermaking, cable, plastics, packaging, elevators, lifting and other special fields.

YE4VP 系列

变频调速三相异步电动机

YE4VP series Frequency-variable Induction Motor

YE4VP系列变频调速三相异步电动机是根据国家政策和响应市场的需求,在2011年开发研制的高效变频调速电动机,其工频380V、50Hz的效率指标达到了国家中小型三相异步电动机能效限定值及能效级GB18613-2012的2级。它具有效率高、噪音低,振动小,调速范围广,运行可靠等优点。

该系列电机采用优越的电磁设计方案及低能耗的冷轧硅钢板和纯度很高的防电晕电磁漆包线,以使电机在低速时恒转矩输出及在高频段保持一定的过载能力。采用性能优良的电磁线及绝缘材料,可靠的浸渍过程及检测措施,使电机在变频器高频载波引起的过电压方面具有很强的适应能力。

YE4VP系列变频调速电机采用独立的风机冷却,以保证电机在低速长期运行时温升不超过允许值。

YE4VP系列电机安装尺寸与功率的对应关系,除外形轴向长度外,安装尺寸与Y2VP系列电机一样,便于选型,安装,维护和互换。

YE4VP系列电机可方便的安装制动装置,编码器,测速机以实现快速制动和自动控制。

YE4VP系列变频调速电机,广泛用于纺织、风机,水泵调节流量及机床、化工冶金、钢铁等行业的恒转矩(基频以下)和恒功率(基频以上)调速,并可以满足造纸、电缆、塑料、包装、电梯、起重等特殊领域的需要。

YE4VP frequency conversion motor is based on national policies and in response to market demand, in 2011, developed high efficiency variable frequency motor. 380V, 50Hz efficiency indicators reached the national small and medium-sized three-phase asynchronous motor energy efficiency limit value and energy efficiency level GB18613-2012 level 2. It has the advantages of high efficiency, low noise, small vibration, wide speed range, and reliable operation.

This series of motors adopts superior electromagnetic design and low energy consumption of cold-rolled silicon steel sheets and high purity anti-corona copper wire, so that the motor at low-speed constant torque output and in the high frequency maintain a certain overload ability. The use of excellent performance of copper wires and insulation materials, reliable impregnation process and detection measures, so that the motor has a strong adaptability during motor overloading when working together with frequency inverter.

YE4VP motor adopts independent fan cooling to ensure that the temperature rise of the motor does not exceed the allowable value when running at low speed for a long time. YE4VP series motor mounting dimension and power correspondence, except for the axial length, the mounting dimension is the same as the Y2VP series motor, easy to install and maintain, etc.

YE4VP series motor, widely used in textile, fan, water pump and machine tools, chemical metallurgy, steel and other industries of constant torque (below the base frequency) and constant power (above the base frequency) speed regulation, and can meet the needs of papermaking, cable, plastics, packaging, elevators, lifting and other special fields.

XYT 系列

稀土永磁同步电动机

XYT series Rare Earth Permanent Magnet Synchronous Motor

众所周知，电动机是将电能转化为机械能的机械，而这种能量的转换，必须以磁场为平台。在同样负载条件下，永磁同步电动机与异步电动机相比，减少了定子电流和定子铜损耗。由于稀土永磁电动机以同步转速运转，定子转子间无滑差，在稳定运行时没有转子铜耗和铁耗，进而可以减小风扇，相应的风摩损耗亦可减小。基于稀土永磁电动机不需要无功励磁电流，所以可显著提高功率因数至极限值(1.0)；由于稀土永磁电动机各项损耗的减小，其效率得以明显的提高，与同规格异步电动机相比，效率可提高4~8个百分点，而且永磁同步电动机在20%~120%额定负载范围内可保持较高的效率和功率因数，使轻载时节能更为显著。

在多年工程实践基础上，本公司设计、研制和生产了XYT系列稀土永磁同步电动机。可广泛用于驱动各类通用设备，如水泵、风机、压缩机、纺织机械、金属拉丝、搅拌机、各类轻工设备，也可适用于石油、化工、医药、水泥、矿山、船舶等环境有特殊要求的行业。

应用实践证明，采用XYT系列稀土永磁同步电动机，能适应多种负载工况要求，有明显的节能效果，运行可靠安全、替代成本低、投资回收期短，得到了国家“电机系统节能工程”的推荐，并被国家财政部、国家安全发改委批准，本公司和XYT系列产品被批准纳入惠民工程。

As we all know, the induction motor is a machine that converts electrical energy into mechanical energy, and the conversion of this energy must be based on the magnetic field as a platform. Under the same load conditions, permanent magnet synchronous motors reduce stator current and stator copper losses compared to asynchronous motors. Because the rare earth permanent magnet motor runs at a synchronous speed, there is no slip difference between the stator, rotors, and there is no rotor copper consumption and iron consumption during stable operation, which can reduce the fan, and the corresponding wind friction loss can also be reduced. Based on the rare earth permanent magnet motor does not require reactive excitation current, the power factor can be significantly improved to the limit value (1.0); Due to the reduction of the losses of rare earth permanent magnet motors, its efficiency can be significantly improved, compared with the same specifications of asynchronous motors, the efficiency can be increased by 4 to 8 percentage points, and the permanent magnet synchronous motor can maintain high efficiency and power factor in the rated load range of 20% to 120%, making energy savings more significant at light load.

On the basis of years of engineering practice, the company designed, developed and produced XYT series three-phase rare earth permanent magnet synchronous motor, can be widely used to drive all kinds of general equipment, such as pumps, fans, compressors, textile machinery, metal drawing, mixers, all kinds of light industry equipment, but also for petroleum, chemical, pharmaceutical, cement, mining, shipbuilding and other environments have special requirements of the industry.

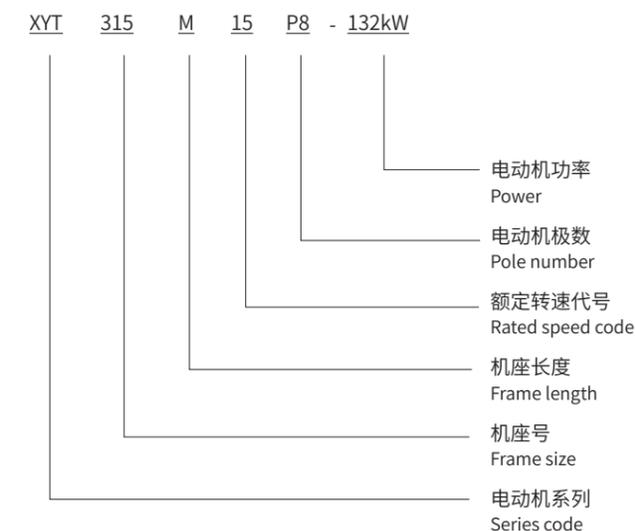

The performance has proved that the use of XYT series three-phase rare earth permanent magnet synchronous motor, can adapt to a variety of load conditions requirements, has obvious energy-saving effect, reliable and safe operation, low replacement cost, short payback period, has been recommended by the national "motor system energy-saving project", and approved by the Ministry of Finance, national security development and Reform Commission, the company and XYT series products were approved into the project to benefit the people.

The model of the permanent magnet motor is composed of product name code, frame number, core length, pole number, etc.

电压和频率

本公司可接受用户特殊电压的永磁电动机的订货。

允许电压偏差±5%，频率偏差±2%条件下连续运行，实现规定的基本功能。但其性能不必与额定电压和频率时的性能完全相符，可能呈现某些差异，温升可较额定电压和频率时高。

Voltage and frequency

The company can accept the user's special voltage permanent magnet motor order.

The allowable voltage deviation $\pm 5\%$, frequency deviation $\pm 2\%$ continuous operation, to achieve the specified basic functions. However, its performance does not have to be exactly the same as the performance at the rated voltage and frequency, and there may be some differences, and the temperature rise can be higher than that of the rated voltage and frequency.

失步转矩

永磁电动机的失步转矩高低，反映了永磁电动机的过载能力大小，失步转矩是永磁电动机的重要性能。

XYT系列永磁同步电动机的失步转矩倍数在2.0~2.5范围内，具有良好的过载能力。

永磁电动机在热状态和逐渐增加转矩的情况下，能够承受永磁电动机性能表中规定的失步转矩值(计及容差)，历时15s而无转速突变，停转及发生有害变形。此时，电压和频率应维持在额定值。

Pull-out torque

The level of the pull-out torque of the permanent magnet motor reflects the overload capacity, and the pull-out torque is the important performance of the permanent magnet motor.

The pull-out torque multiple of XYT series permanent magnet synchronous motors is in the range of 2.0 to 2.5, and it has good overload capacity.

In the case of thermal state and gradually increasing torque, the PM motor can withstand the stepless torque value specified in the performance table of the permanent magnet motor (taking into account tolerance), which lasts for 15 seconds without sudden change in speed, stop rotation and harmful deformation. At this point, the voltage and frequency should be maintained at the rated value.

额定输出

额定输出是指,符合GB755标准的要求,电压、频率为额定值,冷却介质温度(CT)为40°C,设备安装地点的海拔高度为1000m以下的情况下,连续工作可以允许的输出。

在上述运行条件下的使用。如果实际的运行条件偏离规定的数值,那么应根据功率降格表中规定的降格系数降低电动机允许的最大输出。

Rated output

The rated output refers to the output that can be allowed for continuous operation in the case of meeting the requirements of the GB755 standard, the voltage and frequency is at the rated value, the cooling medium temperature (CT) is 40 °C, and the altitude of the equipment installation site is below 1000m.

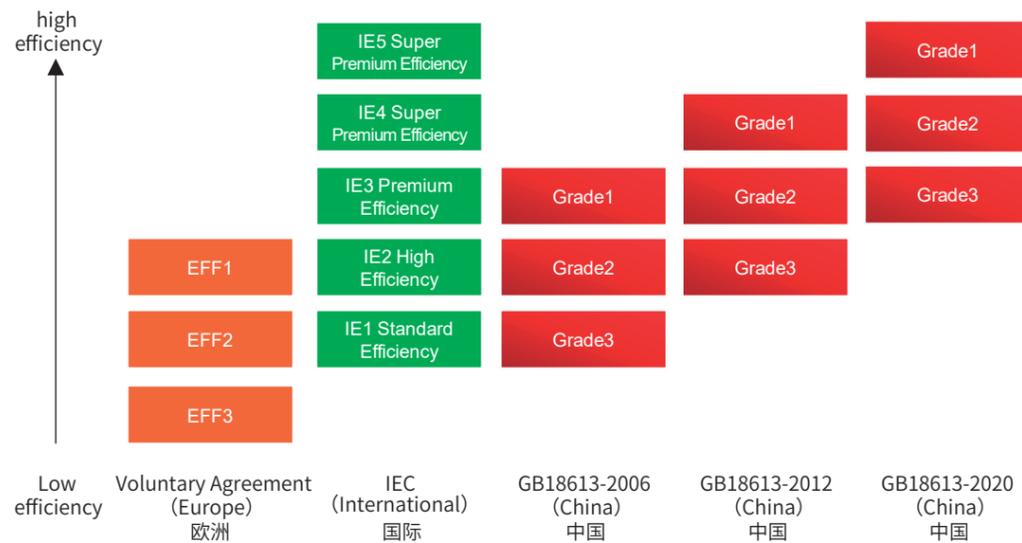

If the actual operating conditions deviate from the specified values, the maximum allowable output of the motor should be reduced according to the downgrading factor specified in the power downgrade table. The relationship between the power degradation coefficient of the motor and the altitude

The use of the internationally famous DURIGNIT-2000 insulation system, is the XYT series permanent magnet motor windings have strong electrical strength, mechanical strength and heat stress resistance, can be applied to moisture-proof, mildew-proof, salt spray requirements of harsh environments; At the same time, when varnishing, the stator winding is well filled with resin, and the pores are very few; The insulation structure is made of materials that are corona resistant. Therefore, the XYT series PM motor can be ran reliable when working with VFD.

Temperature rises

The permanent magnet motor adopts IP55 (F) class insulation, the temperature rise (resistance method) of the stator winding is assessed by 130 (B) class insulation 80K, and the temperature rise margin of the XYT series permanent magnet motor is large.

防止永磁体退磁的措施

永磁电机采用的磁性材料如硅钢片、永磁体等在使用中均会不同程度的退磁,我们要求退磁速度十分缓慢。在永磁电机寿命周期内及以后一段时间内,不影响永磁电机的性能,正常可靠运行。

为防止永磁体产生不可逆失磁现象,XYT系列永磁电动机在设计 and 制造中采取了一系列技术和工艺措施:

选用工作温度高的永磁材料

XYT系列永磁电动机采用了烧结钕铁硼,其最高工作温度为180°C

根据多年工程积累,设计中合理选定永磁体负载工作点,抵御电枢反应去磁作用,确保永磁电动机工作性能稳定。

对永磁体不盲目采购

编制了完整的永磁体订货技术要求,除明确外形尺寸和技术性能外,还明确了“辅助磁性”、“物理性能”、“可靠性要求”、“一致性要求”、“和“最高工作温度”,不盲目采购。

微调了永磁体配方,增添微量的钐(Sm)、钴(Co)和镝(Dy),一方面增强永磁体耐热性能,另一方面增强抵御电枢反应带来的去磁作用。

对永磁体进行磁稳定工艺

永磁体充磁之后,在通常的环境条件下,磁性能随时间变化,其变化称为自然时效。磁稳定处理就是将永磁体充磁后保存在150°C/5小时,以加速时效过程,可加速磁结构的稳定过程,在此过程中磁损耗在2.5%以内。磁稳定处理后永磁体磁性能几乎不再随时间推移而下降。

Measures to prevent demagnetization of permanent magnets

The magnetic materials used in PM motors, such as silicon steel sheets, permanent magnets, etc. will be demagnetized after reaching its lifespan, and we require that the demagnetization speed is very slow. During the life cycle of the permanent magnet motor and for a period of time, it does not affect the performance of the permanent magnet motor and operates normally and reliably.

To prevent the irreversible demagnetization phenomenon of permanent magnets, XYT series PM motors have adopted a series of technical and process measures in the design and manufacture:

Select permanent magnet material with high operating temperature.

The XYT PM motors use sintered NdFeB with a maximum operating temperature of 180°C

According to years of working experiences, the permanent magnet load working point is reasonably selected in the design to resist the demagnetization of the armature reaction and ensure the stable working performance.

Permanent magnet sourcing

Compiled complete technical requirements for permanent magnet ordering, in addition to clarifying the outline size and technical performance, but also clarified the "auxiliary magnetic performance", "physical properties", "reliability requirements", "consistency requirements", and "maximum working temperature to ensure the permanent magnet is qualified.

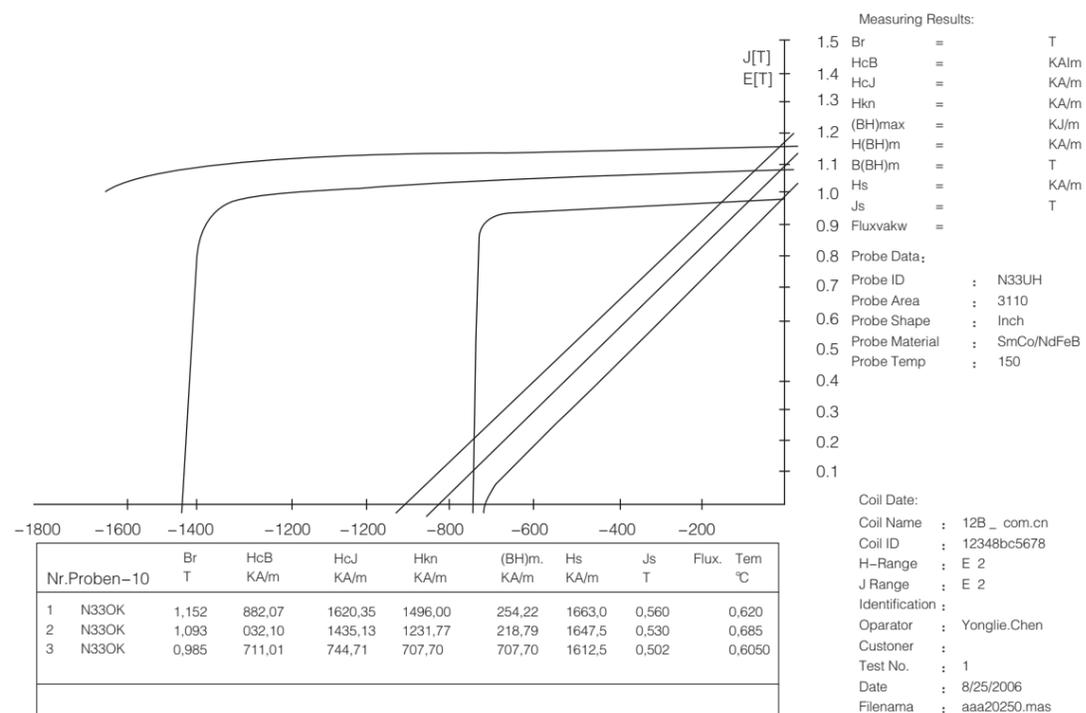

Fine tune the permanent magnet formula and add a small amount of samarium (SM), cobalt (CO) and dysprosium (Dy) to enhance the heat resistance of the permanent magnet on the one hand and resist the demagnetization caused by armature reaction on the other hand.

Permanent magnet process

After the permanent magnet is magnetized, under normal environmental conditions, the magnetic properties change with time, and its change called natural aging. Magnetic stabilization treatment is to store the permanent magnet at 150 °C/5 hours after magnetization to accelerate the aging process, which can accelerate the stabilization process of the magnetic structure, and the magnetic loss in this process is within 2.5%. The magnetic performance of permanent magnets after magnetic stabilization treatment almost no longer degrades over time.

下图为磁稳定前、后的内禀矫顽力曲线和退磁曲线

The following picture shows the internal coercive force curve and demagnetization curve before and after magnetic stabilization

对永磁体进行化学稳定工艺处理

受化学因素,如酸、碱、氧气、腐蚀性气体等影响,永磁体内部或表面化学结构发生变化,会引起磁性能的变化。如钕铁硼中的铁和钕就比较容易氧化。

XYT系列永磁电动机的永磁体,进行了表面电镀(Ni-Cu-Ni),对纯铁粉改变配方,减少了含氧量,从永磁体内、外防氧化,均采取了措施。

Chemically stabilized the permanent magnets

Affected by chemical elements, such as acids, alkalis, oxygen, corrosive gases, etc., changes in the chemical structure of the internal or surface of the permanent magnet will cause changes in magnetic properties. For example, the iron and neodymium in NdFeB are easier to oxidize. The permanent magnet of the XYT PM motor has been surface plated (Ni-Cu-Ni), the formula of pure iron powder has been changed, the oxygen content has been reduced, and measures have been taken to prevent oxidation from the permanent magnet inside out.

YE3GW/YE4GW 系列

耐高温三相异步电动机

YE3GW/YE3GW series
High Temperature Resistant
Three Phase Asynchronous Motor

随着纺织印染机械的发展,对电机的使用条件、性能等指标提出了更高的要求,特别是印染机械的循环风机,使用条件更是恶劣,而以往电机轴的硬度、轴承及绕组线圈的耐高温性能等无法达到其要求,在纺织印染机械上使用,稳定性、可靠性很差,经常发生绕组烧毁,轴承咬死等现象,给用户带来停机停产等严重的经济损失。

YE3GW/YE4GW系列耐高温三相异步电动机是我公司在与印染机械行业配套近20年的基础上,根据用户提出的要求,我公司又成功研制的新一代耐高温电机,具有新型的外观,并新增了前、后端盖注、排油孔,同时在内盖内增加甩油结构,防止加油时将油脂挤进电机内腔。并且用规范油管接至电机尾部,用户能在不拆装电机的前提下能正常给轴承加油。在使用环境 $\leq 55^{\circ}\text{C}$ 时,出轴与法兰等部分温度提高到 250°C 的恶劣环境下与循环风机直接相连能连续正常工作。轴承全部采用耐高温的特种轴承,电机在运行1500小时左右,即应加注7017-1B耐高温润滑脂,以保证轴承的使用寿命,并在电机材料上全部采用H级绝缘材料,延长电机使用寿命,保证了印染机械行业的连续生产。具有结构紧凑、性能可靠、方便耐用等特点。

With the development of textile printing and dyeing machinery, higher requirements are asked on motor working conditions and performance. The working condition for circulating fan of dyeing machine is even worse.

YE3GW/YE4GW series motor is our second generation of high temperature resistant motor, designed on the basis in our company 20 years experience and according to user request.

The motor has aesthetic appearance and oil drain device for injection at DE and NDE side. Inner cover also has oil thrower inside to avoid grease into the lumen when oiling.

When the Ambient temperature is less than 55 degrees, the temperature of shaft, flange and other parts increase to 250 degrees, the motor can be still working well for connecting directly to the circulating fan.

Using high temperature resistant bearing which should be filled in 7017-1B high temperature grease after 1500 hours running.

H class insulation makes the motor with higher heat stability and longer life, and ensures the continuous production of printing and dyeing machinery industry.

XYTZ 系列

耐高温永磁同步电动机

XYTZ series High Temperature Permanent Magnet Synchronous Motor

随着纺织印染机械的发展,用户对电机能效要求的提高,我司成功研制的耐高温永磁同步电动机,不仅能有效满足印染机械恶劣的使用工况,电机效率更比同规格异步电机提高4个百分点。节电率可以达到6%以上。

在环境温度 $\leq 55^{\circ}\text{C}$ 时,出轴与法兰等部分在温度高达 200°C 的恶劣环境下,连续工作,轴承全部采用耐高温的特种轴承,电机按指定周期和牌号加注耐高温油脂,并考虑在不拆装电机的前提下能在主机上为电机方便加注油脂,特意在前后端盖上设计了轴承加油装置,以保证其电机使用寿命,并在电机材料上全部采用H级绝缘材料,保证了印染机械行业的连续生产。具有结构紧凑、性能可靠、方便耐用等特点。

With the development of textile printing and dyeing machinery,Improvement of users' requirements for motor energy efficiency,High temperature permanent magnet synchronous motor successfully developed by our company.It can not only effectively meet the harsh working conditions of printing and dyeing machinery, but also improve the motor efficiency by 4% compared with the asynchronous motor of the same product. The power saving rate can reach more than 6%.

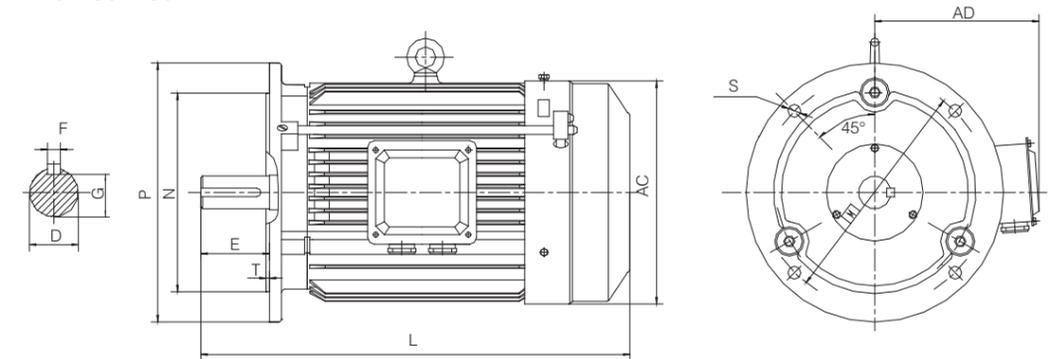

When the Ambient temperature is less than 55 degrees,the temperature of shaft,flange and other parts increase to 200 degrees. the motor can be still working well ,All of motors using high temperature resistant bearing ,The motor shall be filled with high-temperature grease according to the specified cycle and brand. Considering that the motor can be easily filled with grease on the main machine without disassembling the motor, the bearing oil filling device is specially designed on the front and rear end covers to ensure the service life of the motor, H class insulation makes the motor with higher heat stability and longer life,and ensures the continuous production of printing and dving machiner industry.

YTDD系列永磁伺服直驱拉丝机专用电机类型 YTDD PM special motor for wiring machine

YTDD系列永磁伺服直驱拉丝机专用电机是目前最大转矩密度的技术解决方案,是为高性能的运动控制而设计的。

所有的电机都是三相永磁同步伺服电机,转子采用了高磁能积的Nd2Fe14B 稀土永磁材料。

所有的电机具有H级热绝缘等级,电机中还安装有PT100温度传感器用来监控电机温度。

所有的电机设计成流体冷却,也可以是传导/对流冷却。对于弱磁运行,需要流体冷却措施。

所有电机的定子绕组都是经真空浸漆的三相绕组,可提供最好的机械特性、绝缘和散热性能。

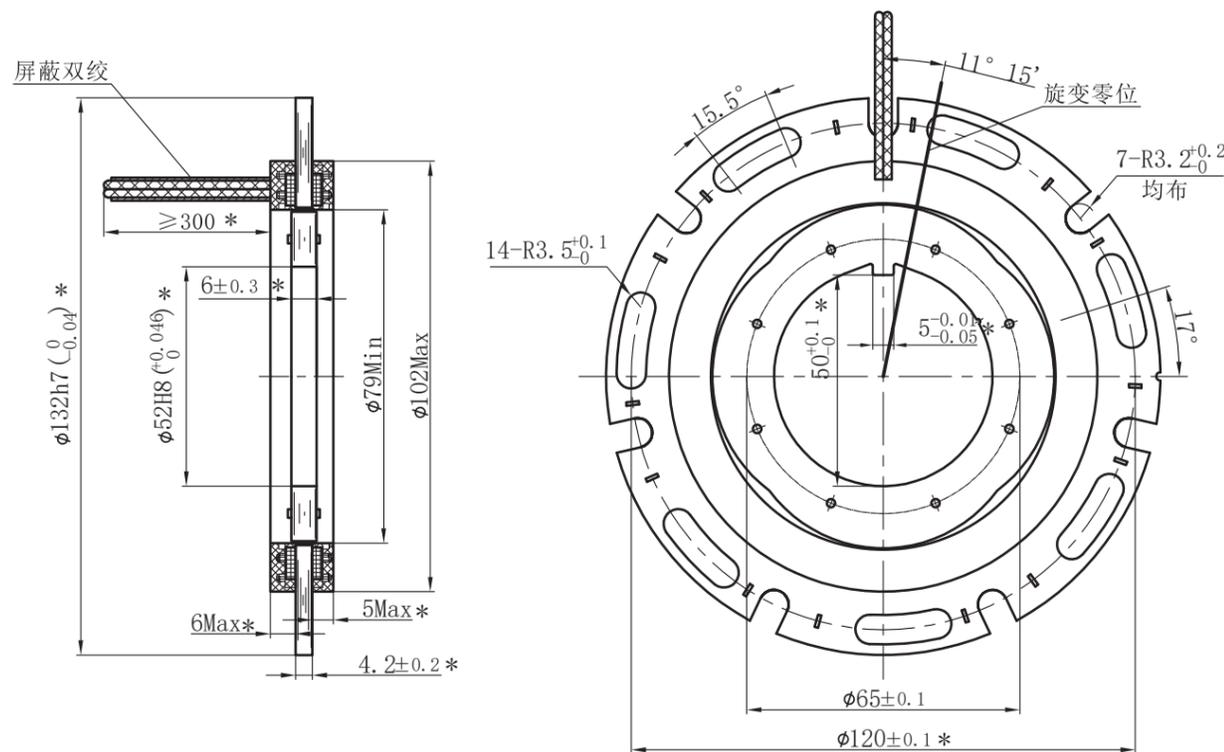

所有的电机提供的电源和传感器线长度为1000mm,用户可提出不同的长度要求。对于用户的结构,还可以提供电源和信号连接器。

YTDD系列永磁伺服直驱拉丝机专用电机带有旋变位置传感器。

The YTDD series special motor is the technical solution for the maximum torque density at present, and is designed for high-performance motion control.

All motors are three-phase permanent magnet synchronous servo motors, and the rotor uses Nd2Fe14B rare earth permanent magnet material with high magnetic energy product. All motors have a Class H insulation and a PT100 temperature sensor is installed in the motor to monitor the motor temperature. All motors are designed for fluid cooling, which can also be conductive or convective cooling. For weak magnetics operation, fluid cooling measures are required. The stator windings of all motors are vacuum-impregnated that provide the best mechanical properties, insulation and heat dissipation. All motors are supplied with a length of 1000mm of power and sensor lines, which can be requested by the user in different lengths. For user structures, power and signal connectors are also available.

YTDD series special motor is also applied with resolver position sensor.

应用领域介绍 Application

拉丝机是在工业应用中使用很广泛的机械设备,广泛应用于机械制造、五金加工、石油化工、电线电缆等行业。

1、应用于金属行业

金属拉丝机,属于标准件等金属制品生产预加工设备,目的是为了把由钢材生产厂家生产运输至标准件等金属制品生产企业的线材或棒材经过拉丝机的拉拔处理,使线材或棒材的直驱、圆度、内部金相结构、表面光洁度和矫直度都达到标准件等金属制品生产需要的原料处理要求。因此拉丝机对线材或棒材的预处理质量直接关系到标准件、等金属制品生产企业的产品质量;拉丝机属于金属制品设备行业金属线材拉丝机,拉丝机广泛应用于钢丝、制绳丝、预应力钢丝、标准件等金属制品的生产和预加工处理。

2、电线电缆行业铜线加工拉丝机是电线电缆行业主要加工设备之一,主要是将铜线加工成各种规格细线,一般由放线、水冷、收线及排线等部分组成,其中电气传动部分主要由放线电机和收线电机及排线电机实现。随着节能环保要求的不断推广,永磁同步伺服直驱电机正日益被用于拉丝机设备。

3、线材或棒材的拉拔处理金属制品生产企业的线材或棒材经过拉丝机的拉拔处理,使线材或棒材的直驱、圆度、内部金相结构、表面光洁度和矫直度都达到标准件等金属制品生产需要的原料处理要求。因此拉丝机对线材或棒材的预处理质量直接关系到标准件、等金属制品生产企业的产品质量。拉丝机广泛应用于钢丝、制绳丝、预应力钢丝、标准件等金属制品的生产和预加工处理。

4、用于焊丝的生产

焊丝生产需要先把原料加工成圆柱形铸锭,铸锭的直驱一般为7至12Cm,而焊丝细的只有1mm,所以铸锭经过挤压和反复拉丝,最终成焊丝成品。在整个加工过程中,需要配备挤压机、收线机、拉丝机、校直机。

Wire drawing machine is widely used mechanical equipment, such as manufacturing, hardware processing, petrochemical, wire and cable and other industries.

Metal drawing machine belongs to the standard parts and other metal products production pre-processing equipment, the purpose is to produce and transport from steel manufacturers to standard parts and other metal products production enterprises of wire rods or bars through the drawing of the wire drawing machine, so that the wire or bar direct drive, roundness, internal metallographic structure, surface finish and straightening are up to the standard parts and other metal products production needs of raw material processing requirements. Therefore, the pretreatment quality of wire rods or bars of the wire drawing machine is directly related to the quality of standard parts and other metal products production enterprises; Wire drawing machine belongs to the metal products equipment industry metal wire drawing machine, wire drawing machine is widely used in steel wire, rope wire, prestressed steel wire, standard parts and other metal products production and pre-processing processing.

Cable industry copper wire processing drawing machine is one of the main processing equipment in the wire and cable industry, mainly the copper wire is processed into a variety of specifications of fine wire, generally composed of line release, water cooling, wire collection and wiring and other parts, of which the electrical transmission part is mainly by the discharge motor and the wire receiving motor and the wire motor to achieve. With the continuous promotion of energy-saving and environmental protection requirements, permanent magnet synchronous servo direct drive motors are increasingly being used in wire drawing machine equipment.

The wire or bar is pulled by the wire or bar of the metal products production enterprise through the drawing process of the wire drawing machine, so that the direct drive, roundness, internal metallographic structure, surface finish and straightening of the wire or bar meet the raw material processing requirements required for the production of metal products such as standard parts. Therefore, the pretreatment quality of wire or bar drawing machine is directly related to the product quality of standard parts and other metal products manufacturers. Wire drawing machine is widely used in the production and pre-processing of steel wire, rope wire, prestressed steel wire, standard parts and other metal products.

Welding wire production

The production of welding wire needs to first process the raw material into cylindrical ingots, the direct drive of the ingot is generally 7 to 12Cm, and the welding wire is only 1mm, so the ingot is extruded and repeatedly brushed, finally becomes a finished wire. In the whole processing process, it is necessary to be equipped with extruders, wire retractors, wire drawing machines, straightening machines.
